PyData Tel Aviv is the annual PyData conference in Israel. The 2023 conference will be held on November 14th, at the David InterContinental Hotel.

We are expecting 600 data enthusiasts to attend the event and a keynote talk by **Wes McKinney**, creator of Pandas.

PyData brings the Python & Data Science communities together through its events around the world. The PyData brand is well known and respected for its high standards and diverse appeal.

PyData TLV is a non-profit event. In a case of a surplus in our budget, any proceeds will go to support NumFOCUS, whose mission is to promote open practices in research, data, and scientific computing. NumFocus is the sponsoring body behind many of the open-source scientific python packages such as pandas, numpy, scikit-learn, IPython, and many more.
